ASSIGNMENT-4

Name: SUJAL SRIVASTAVA

Reg. No.: 20BME0699

Ex No: - 4

Title: - Knuckle Joint

Aim: To construct knuckle joint with the help of fusion 360.

Procedure:

One-eye End-

1. Create a new component on the front plane and draw a circle of “d” diameter and extrude. Draw the construction line and give a symmetric extrude and unhide the body.

2. Draw centre point rectangle and extrude as join and go to revolve and the mirror select profile and then mirror plane.

Fork end-

3. Select front plane and then draw a circle of shaft diameter and extrude it in negative direction.

4. Select the top plane and take the tangent arc and draw 2 arcs and draw horizontal and vertical lines. Drag both the lower profile and go to constraints and adjust the arc. Make symmetry and give a lower arc. Select front plane and hide body 2 make all side equal an give operation cut.

5. Select the right plane and draw a circle and give the extrude cut.

Taper Pin-

1. Take a top plane and draw a circle of 0.1|*d and go to Knuckle Pin.

2. On the front plane, draw 2 concentric circles and go to extrude.

3. Unhide the sketch and select right plane.

4. Draw a hole on this surface.

5. Give the extrude of the hole as the whole length and symmetric.
