**ASSIGNMENT-3**

**Name: SUJAL SRIVASTAVA**

**Reg. No.: 20BME0699**

**Ex No: - 3**

**Title: - Universal Coupling**

***Aim:*** To construct universal coupling with the help of fusion 360.

***Procedure:***

Fork:

1.) Create the new component as 'fork'

2.) Take the front plane.

3.) Make the rectangle.

4.) Extrude the rectangle and give the extrusion length as 0.6*d.

5.) Go to the front plane. Draw two concentric circles.

6.) Extrude the outer part.

7.) Select the top plane.

8.) Draw two concentric circles. Draw two tangent lines and trim the lower end of the circle.

9.) Finish the sketch. Go to extrude and select this portion and give this as 0.5*d

10.) Go to Mirror—> Type=features. Mirror plane—> bottom plane. Fork is completed.

Central Block:

11.) Create the new component as central block

12.) Go to front plane and draw two concentric circles

13.) Extrude—> symmetric—> whole length.

14.) Go to right plane one by two plane.

15.) Extrude—>Symmetric—>Whole Length.

16.) Remove the extrusion portion. Select the surface—> draw a circle and give the extrude cut. Central block is done.

Fork Pin:-

17.) Create the new component as 'Fork Pin'.

18.) Select the front plane. Draw two concentric circles.

19.) Finish The Sketch.

20.) Go to extrude.

21.) Unhide the sketch.

22.) Select this plane and select the right plane.

23.) Draw a hole on this surface.

24.) Give the extrude cut of the hole—> symmetric—> whole length.

25.) Fork Pin is completed.

***Results:***
